EDUCATION

International University of Logistics and Business

Bachelor's Degree in Informatics Engineering

2020 - Present

Xaverius Senior High School Baturaja

Natural Sciences

2017 - 2020

Junior High School 02 OKU

2015 - 2017

SKILLS

- Flutter
- Vanilla JS
- C-Craft JS
- Node JS
- Javascript
- CSS Tailwinds
- PHP

SERTIFICATE

- Scrum Foundation Professional Certificate
- Mobile Engineer With Flutter Alterra Academy
- Google Defest Bandung
- Javascript Coursera

LANGUAGE

- Indonesian
- English

PROFILE

My name is Christian Yuda Pratama from Baturaja, South Sumatra, graduated from Xaverius Baturaja High School, Continuing his D4 Informatics Engineering studies at the International Logistics and Business University with a final GPA of 3.81. Has more than 4 years of experience in the world of programming and continues to explore new knowledge and experiences related to technology. Has a strong passion in mobile application development with Flutter, and has expertise in front-end development using Vanilla JavaScript and backend with Node.js. In addition, have experience in various databases such as MySQL, MongoDB, MariaDB, and Oracle. Committed to continuous self-development and making positive contributions in the technology industry.

WORK AND PROJECT EXPERIENCE

NDE (Naskah Dinas Elektronik)

Agustus- Present 2024

Front End Flutter and Firebase

- UI/UX Design: Developing user interfaces and user experience designs for managing different types of documents like incoming, outgoing, disposition, and verification letters.
- API Integration: Implementing and integrating APIs to connect the Flutter frontend with backend services, likely hosted on Firebase, for data retrieval and management.
- State Management: Using the Provider package in Flutter to handle state management across the application, ensuring that UI components reactively update in response to data changes.

Hospital Nanjing Xiaozhuang Tongkok

Maret - Mei 2024

Fullstack Engineer (Flutter and NodeJS)

- Needs Analysis: Analysing the needs of the hospital system to design appropriate features.
- UI/UX Design: Design an intuitive and responsive user interface using Flutter.
- Backend Development: Developed the backend using Node.js and Express.js, and set up the MongoDB database.
- API integration: creating doctor and patient api endpoints (node js) and integration to frontend in doctor and client. using Getx and dio state management as http request

WORK AND PROJECT EXPERIENCE

PPDB for vocational schools in Baturaja

April – Mei 2024

Frontend Engineer (Vanilla JS)

- Needs Analysis: Analysing the needs of PPDB of SMK schools in Baturaja to design features that suit the purpose and needs of users.
- Frontend Development: Implementing designs using Vanilla JavaScript to create interactive and responsive applications.
- Integration with Backend: Integrating the frontend with the backend to store and manage student enrolment data.
- Testing: Conducting thorough testing to ensure the application functions properly and provides a seamless experience for users.
- Launch: Launch the PPDB application, ensuring system availability and stability during the registration period.

Dating apps (Firebase and GetX)

Januari 2024

Mobile Engineer with Flutter

- Frontend implementation: Implementing the design using Flutter, with a focus on making login, register, loading, selecting categories, profiles, selecting users both female and male, detailing user profile choices.
- State Management with GetX: Implement GetX as state management to efficiently manage and monitor application state.

Mental Health Care (Altera Academy)

August –
December 2023

Mobile Engineer with Flutter

- Needs Analysis: Analysing the needs of the mental health care application to design appropriate features. where there is the creation of two roles namely for patients and doctors.
- Frontend Implementation: Implement the UI/UX design of figma using Flutter, focusing on responsiveness and customisation of the design.
- Integration with Backend: Integrate the frontend with the backend using RESTful API to access and store data using dio library and its state management provider.
- Testing: Conducting thorough testing to ensure the application functions properly and provides a seamless user experience.

Student hearing application

December 2023

Fullstack Engineer (Flutter and NodeJS)

- Needs Analysis: Analysing the needs of the trial system to design appropriate features.
- UI/UX Design: Design an intuitive and responsive user interface using Flutter.
- Backend Development: Developed the backend using Node.js and Express.js, and set up the MongoDB.
- Integration and Testing: Integrate the frontend and backend, and conduct thorough testing to ensure the quality of the application. and where the frontend uses dio and GetX as its state management.

WORK AND PROJECT EXPERIENCE

Fullstack Developer DTI ULBI (Universitas Logistik dan Bisnis Internasional - Indonesia)

July 2022 - 2024

- SimpelBI Accreditation System: As a Frontend Engineer, I use Vanilla JavaScript to develop the interface, and use rest api to retrieve and manage SimpelBI accreditation system user data.
- HRIS (Human Resource Information System): As a Frontend Engineer, I used Vanilla JavaScript to develop the HRIS user interface. The main focus was to ensure features such as payroll management.
- Frontdesk System: As a Frontend Engineer, I developed the frontdesk system using Vanilla JavaScript. The goal is to enable users to easily access the services and information they need.
- ULBI Repository Application: As a Frontend Engineer, I used Vanilla JavaScript to develop the ULBI repository application. With a focus on a user-friendly interface, the app allows users to search and access data for research purposes.
- Academic System Maintenance: I am responsible for the maintenance and update of ULBI's academic system. This system is a support for other applications because it is the parent application.
- DIAS ULBI: I maintain and update the Dias guardianship system using CodeIgniter 3 (PHP). This application is used as a support for students and guardian lecturers to make repeat payments, register for special exams, and short semesters.
- Alpha ULBI: Questionnaire and SKL/SKPI System: As a Fullstack Engineer, I developed and maintained the Alpha ULBI questionnaire system and SKL/SKPI using PHP. The purpose of this application is as a requirement to view grades and make assessments of lecturers with courses taught in 1 semester. then to record the records of students who have graduated.
- ULBI Services: where I also work as a non-programmer to serve students or lecturers when they are experiencing system problems, making a recap of financial rewards, recording salaries and making correspondence.
